Definition of BU of Dredged Material

Corps 1987 EM 1110-2-5026: *Beneficial Use is utilizing dredged material as a resource in a productive way, which provide environmental, economic, and/or social benefits.*

National Dredging Team's Dredged Material Management: Action Agenda for the Next Decade (2003): Much of the sediment dredged each could be used in a beneficial manner, such as habitat restoration and creation, beach nourishment, and industrial and commercial development; yet much of this dredged material is disposed in open water, confined disposal facilities, and upland disposal facilities; Beneficial use must become a priority at all levels of management and there must be recognition that dredged material is a valuable resource (EPA 2003).

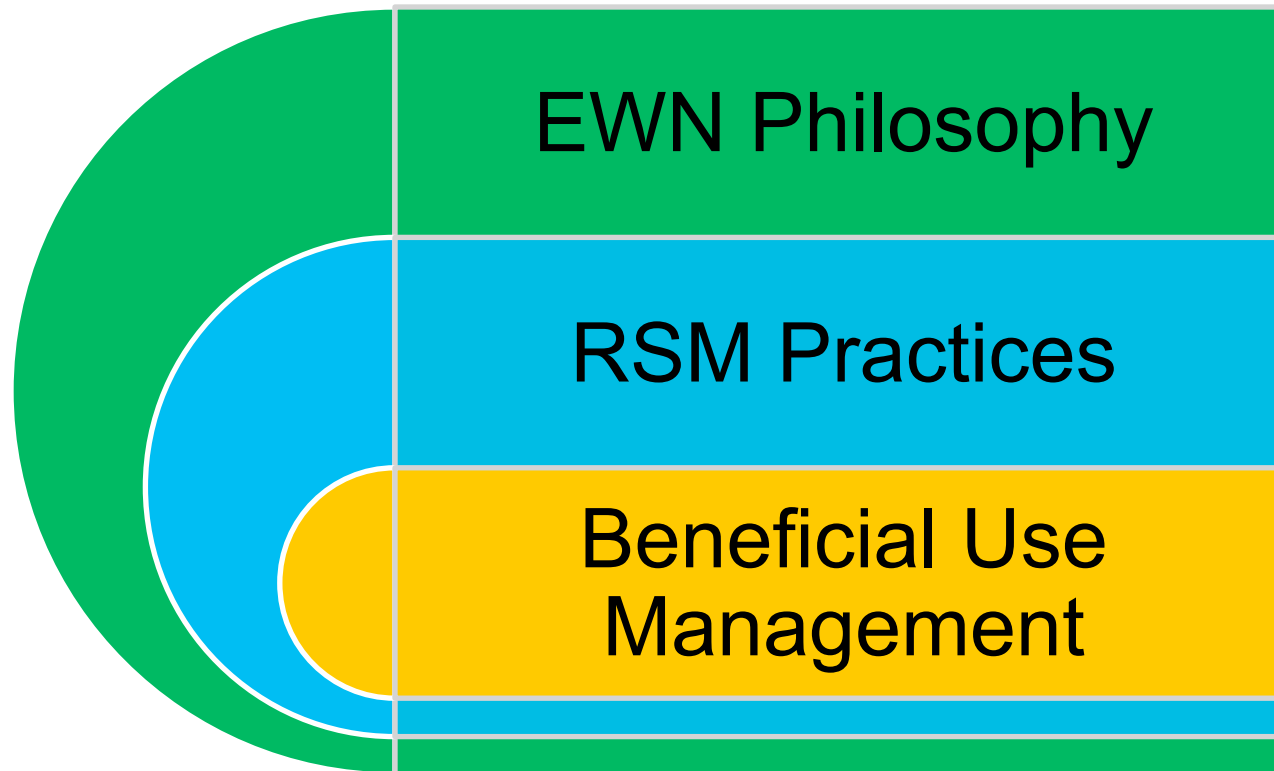

The Corps fully supports and strives to beneficially use dredged material in all circumstances where it is practical and cost-effective, and where those beneficial uses can be accomplished in compliance with all requirements of federal law.

Revised May 2004

Evaluating Environmental Effects of Dredged Material Management Alternatives— A Technical Framework

DM Management Options: Open Water Disposal; Confined Disposal; and Beneficial Use.

DM is a valuable Resource with beneficial uses of such importance that they should be incorporated into project plans.

Portland Oregon 28-30 August 2012

Beneficial Use Categories

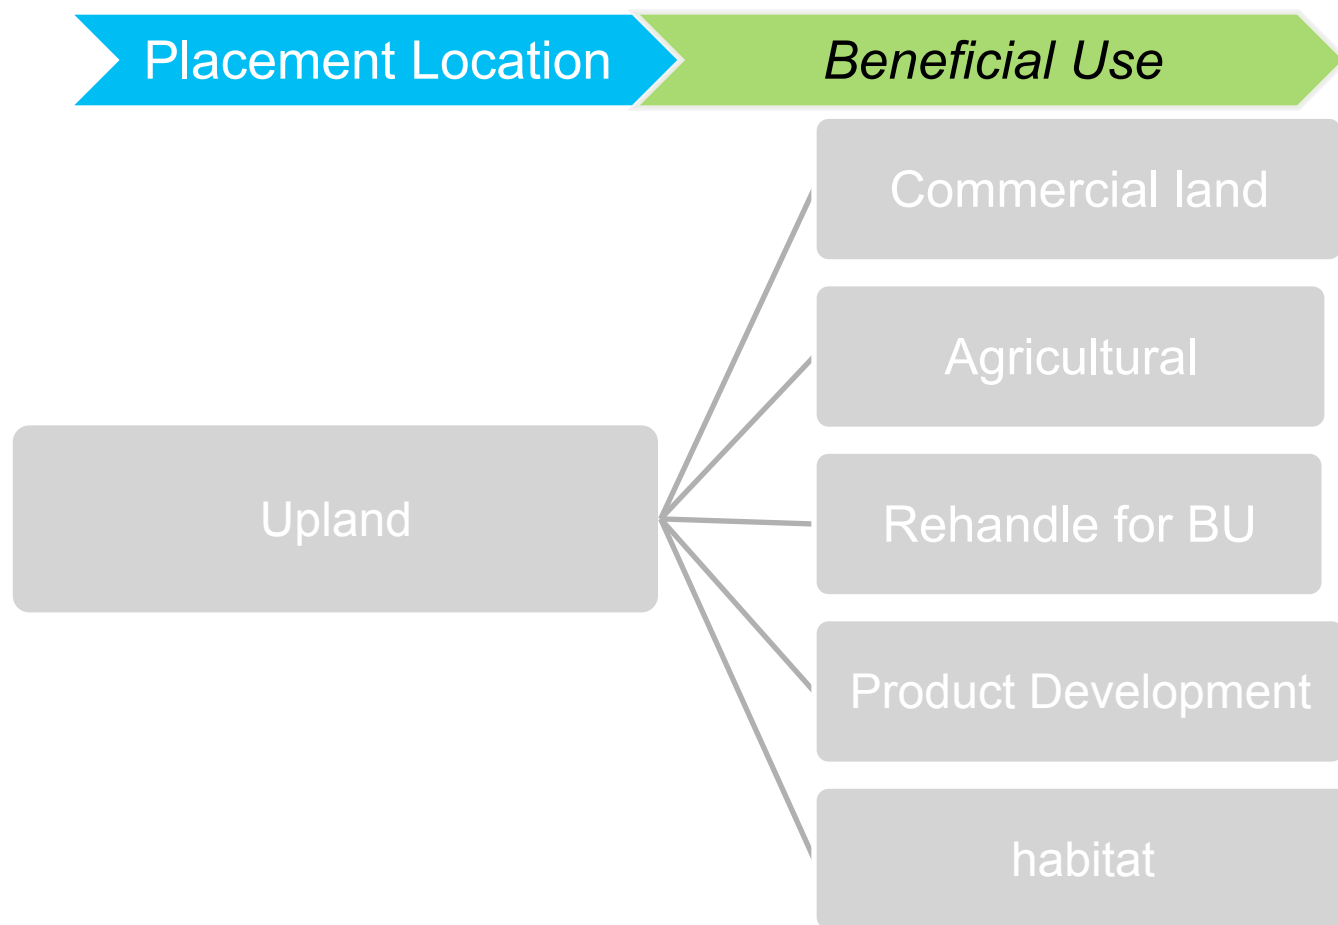

- *Habitat Restoration and Development*
- *Sustainable Relocation (RSM)*
- *Beach Nourishment*
- *Shoreline Stabilization and Protection*
- *Engineered Capping*
- *Aquaculture, Agriculture, Forestry, and Horticulture*
- *Recreational Development*
- *Commercial Land Development*
- *Commercial Product Development*

DM Placement Options

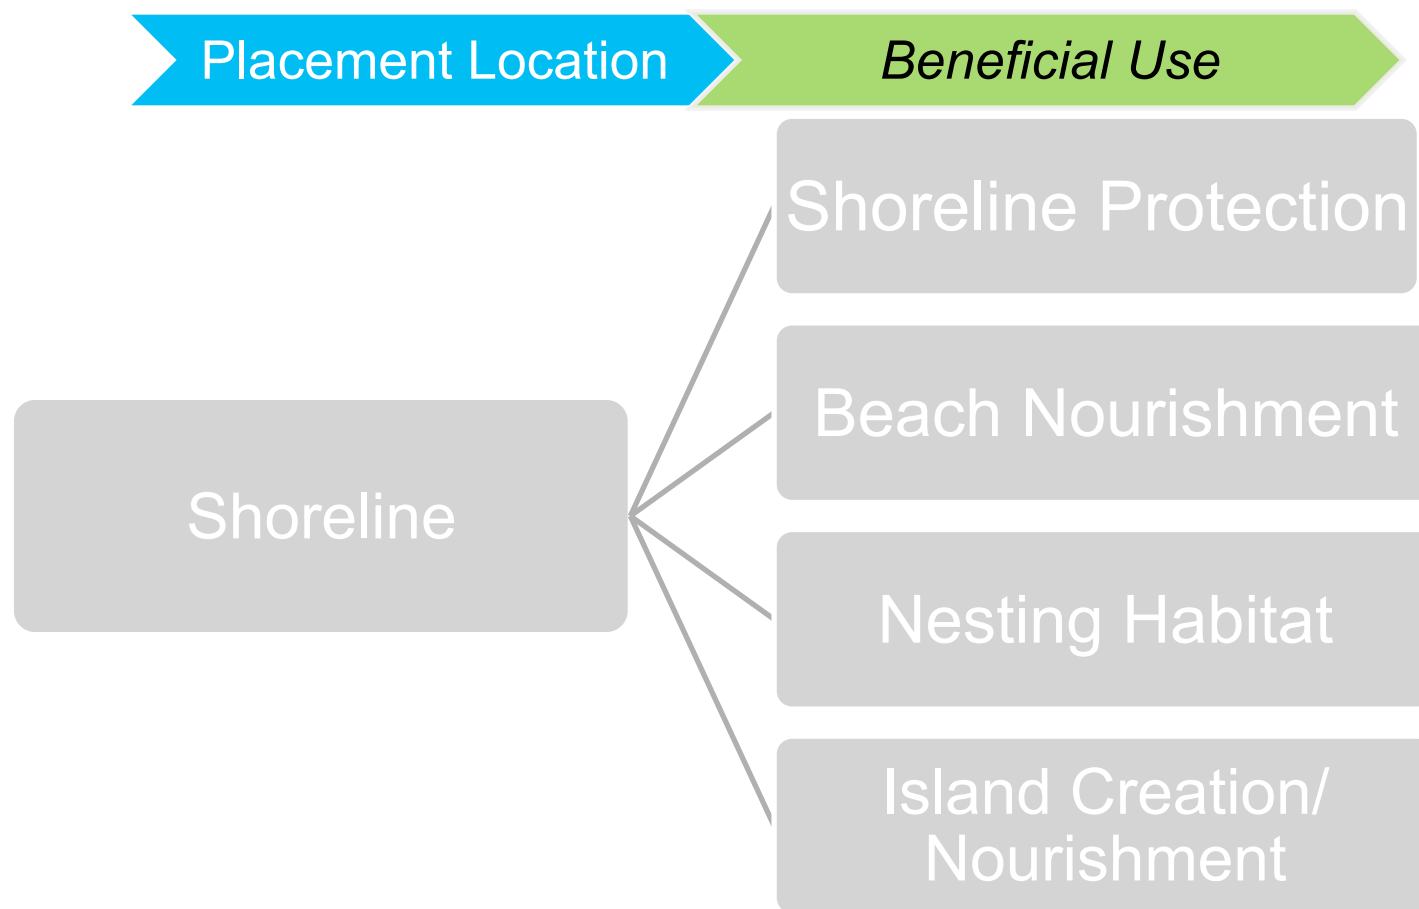

Dredging Operations and Beneficial Use

A satellite map of the San Francisco Bay Area. The map shows the San Francisco Bay, the Golden Gate, and the surrounding land. Key features include the Carmel River, the Hamilton Wetlands Project, and the Montezuma Wetlands. Major highways like I-580, I-5, I-80, and I-880 are visible. The map is overlaid with a grid of latitude and longitude lines. The Google logo is in the bottom right corner. The map data is from 2007, and the image is from 2010. The map shows the Carmel River flowing into the bay, and the Hamilton Wetlands Project and Montezuma Wetlands are highlighted in yellow. The map also shows the San Francisco Peninsula, the Golden Gate, and the surrounding land. The map is overlaid with a grid of latitude and longitude lines. The Google logo is in the bottom right corner. The map data is from 2007, and the image is from 2010. The map shows the Carmel River flowing into the bay, and the Hamilton Wetlands Project and Montezuma Wetlands are highlighted in yellow.

Dredging Operations and Beneficial Use

Island Nourishment: Sand Island—SAM

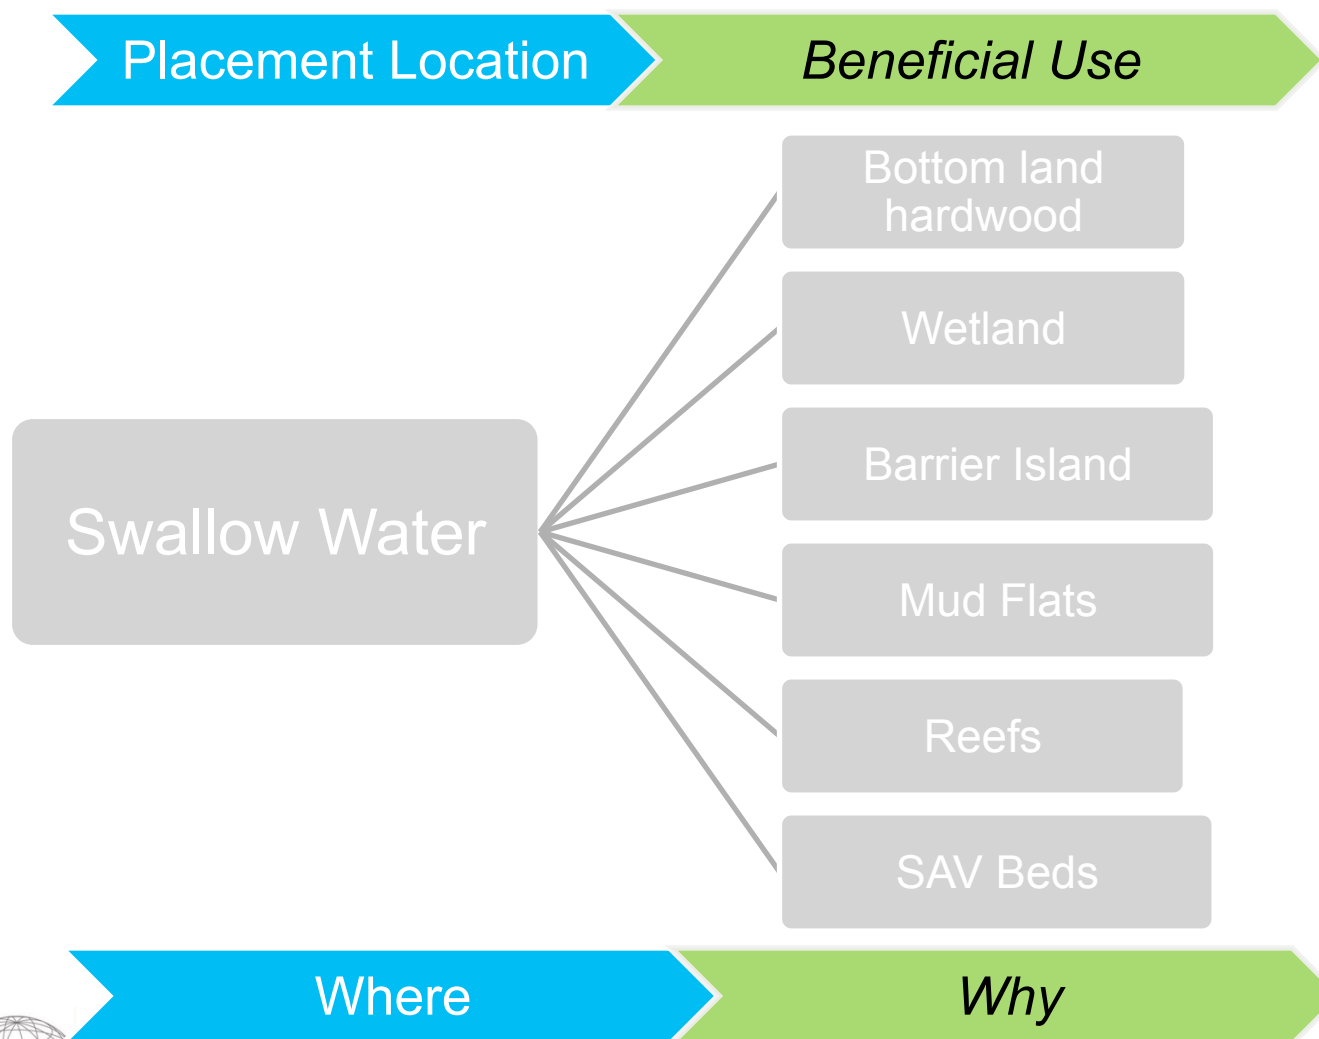

Beach Nourishment

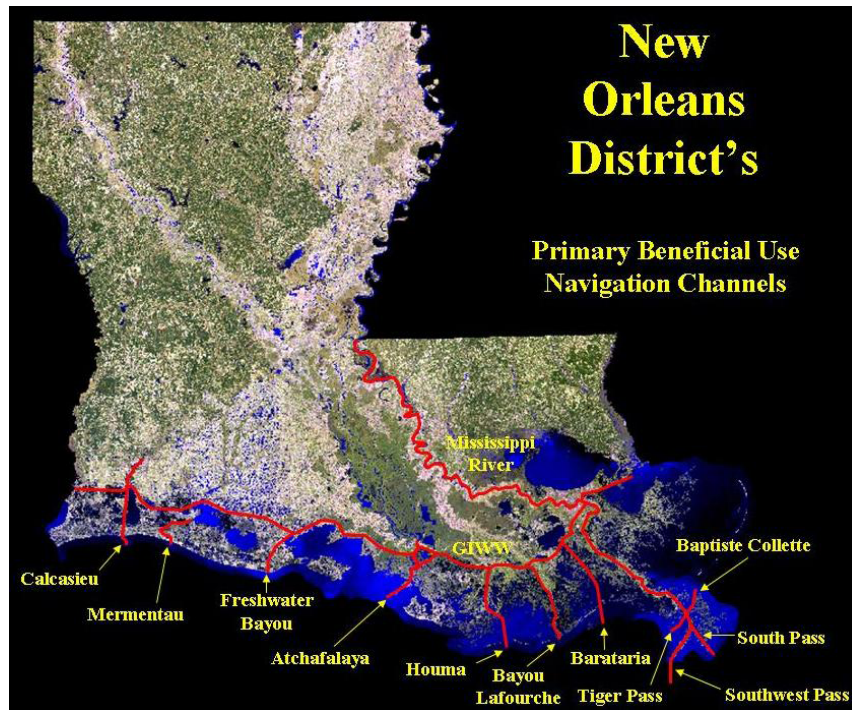

Beach Nourishment

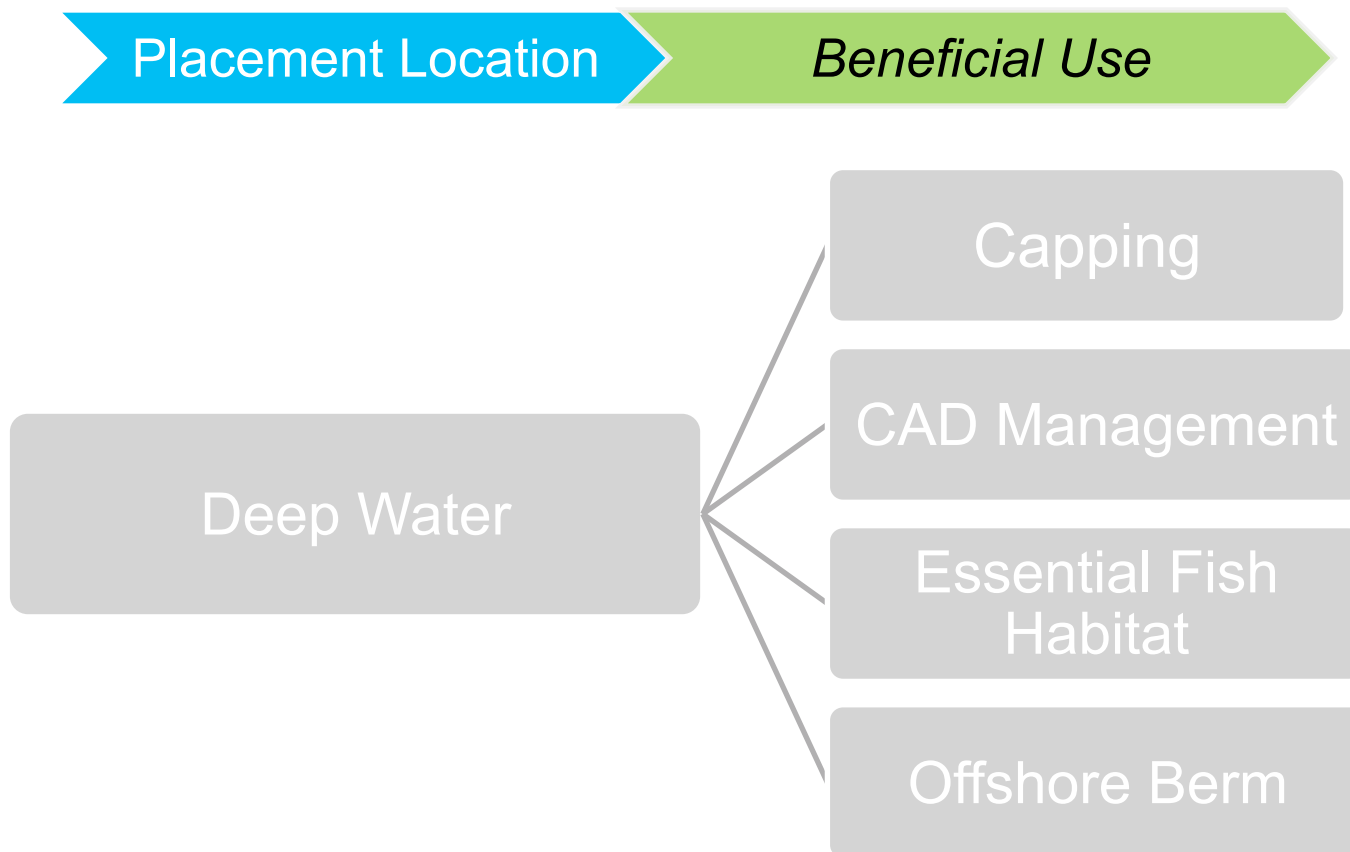

Dredging Operations and Beneficial Use

Wetland Nourishment

Dredging Operations and Beneficial Use

Berm and Flow lane Placement

Corps' Dredge Currituck after dumping a load of sand at an offshore berm at NJ inlet dredging project

BU Alternative Considerations

Material Suitability

- Physical
- Chemical
- Biological
- Regulatory

Site Selection

- Distance
- Slope
- Elevation
- Dredge compatibility
- Public support

Placement Logistics

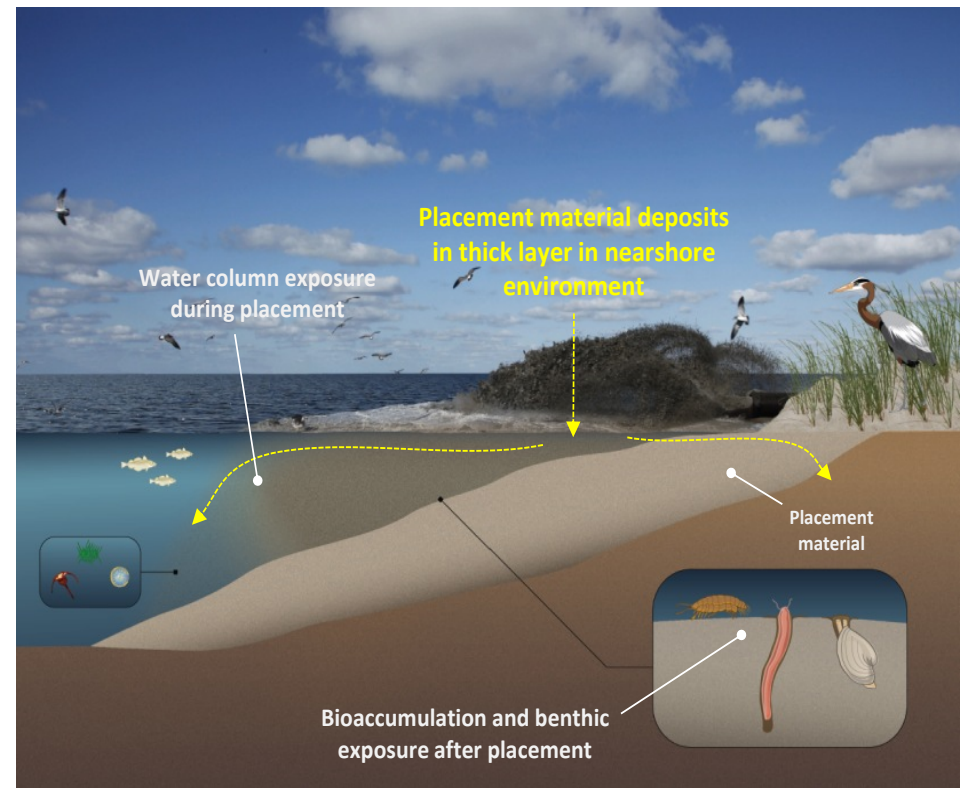

- Hydrodynamics
- Fine Sediment Processes
- Dredge compatibility
- Stability
- Engineering Tools

Funding

- Base Plan
- Sponsors
- Engineering Tools
- MCDA—D2M2

DM Management Conceptual Site Model

Quantification of Benefits

- What parameters should be considered when evaluating “benefits of BU”?
- What are the "environmental" and "human services”?
- Should both environmental and human services be considered?
- Should regional weighting factors be considered?
- Life cycle analysis—(current and future?)
- Valuation (monetary) vs Quantification (index)
- What are Corps Regulatory Limitations?
- What are Corps Opportunities (economic)?

Existing Quantification Methodologies

- **Value= significance + Quality + Quantity**
- **HEP-Habitat Evaluation Procedure**
- **EBI-Environmental Benefit Indicator**
- **HBU-Habitat Benefit Units**
- **EBU-Environmental Benefit Unit**
- **Ecosystem Services**
- **Economic Analysis of Ecosystem-Based Management**

Quantification General Approach

- **Define Categories**
- **Develop Conceptual Models for Categories**
- **List Features (BU) and Attributes (benefits)**
- **Identify various methods for quantification**
- **Determine weighting factor for each variable**
- **Develop algorithm to quantify cost to environmental benefit ratio**
- **Illustrate method with several case studies (past or current)**
- **Monitoring/Update CSM**

DIS Tracking

disp_type: type of material disposal

- **B beach nourishment**
- **C confined**
- **D underwater confined**
- **M mixed, more than one type**
- **O overboard and open water**
- **S open water and upland**
- **T beach nourishment and upland**
- **U upland**
- **W wetlands nourishment or creation**
- **x undefined or not described**

DIS Tracking of disp_type

Table 3. Dredged Material Management Category as tracked by DIS (DIS database 29-Feb-2012), with estimates of Beneficial Use

Tracker (Disp_Type)	Material Management Category	Percentage of total Dredged Material Management from 1995 to 2011	Estimated Percent of Dredged Material Potentially used Beneficially
B	Beach Nourishment	5	5
C	Confined	9	1-5
D	Underwater Confined	1	0-1
M	Mixed, more than one type	10	4-8
O	Overboard and open water	47	10-30
S	Open water and upland	5	1-5
T	Beach nourishment and upland	1	1
U	Upland	7	1-5
W	Wetlands nourishment or creation	8	8
X	Undefined	7	2-5
Total		100	33-73
